Your complete workshop solution

LabNet Profi is more than just the operating software for your Labtec test bench. LabNet Profi is a newly developed, complete test and device management software for your respiratory protection workshop.

With LabNet Profi, you get a comprehensive software package that supports and optimizes all operational processes in your workshop!

LabNet Profi is not tied to a specific device manufacturer. You can adapt the software to your own requirements and enter changed test specifications yourself at any time.

Free support and updates

With Labtec, your workshop will always be up and running. We offer free software support by phone and email.

With an integrated remote maintenance option, we support quickly and efficiently without long waiting times.

Comprehensive annual software updates are also included.

Highlights

LabNet Profi supports you perfectly in your daily work with the Labtec test device with sophisticated functions.

Extensive Localisation

LabNet Profi is translated in 10+ languages including: English, Français, Italiano, Nederlands, Polski, 中文, Español, Svenska, Bokmål, Dansk

No annual subscription

A full version is included with every Labtec PRO and COMPACT tester. Additional workstations are available as a perpetual license.

Batch processing tool

Innovative Quicklist collection function. Document bottle MOT and filling, change of location, decommissioning and more in one step

Easy operation

LabNet Profi is easy for anyone to learn and intuitive to use. With intuitive device management and simple test processes, the software supports every device maintainer in their work.

LabNet Profi Mobile

LabNet Profi Mobile is a special extension module for mobile use. It can be used, for example, to operate a tablet at the scene of an incident in order to record the deployment tracking or to record location changes with the quicklist at a local fire department.

The software works completely offline and independently of the main database. After returning to the fire station, the changes are then synchronized with a special software tool. Changes recorded on mobile devices are added to the main database and the software on the mobile device is updated with all tests.

If necessary, a compact test bench can also be used to carry out tests directly on site.

System requirements

LabNet Profi is developed natively for Microsoft Windows systems and runs on standard hardware.

The database is network-based on the open source MySQL database server. The software offers powerful performance even for extensive databases with several thousand devices.

Data transfer from the previous versions Labtronic NT 1.6 and Lab.NET 2.6 is possible at any time and in full.

Are you coming from third-party software? We also offer a migration service including complete data transfer!

Operating system	Microsoft Windows ® 10/11
Processor	Intel® Core i3 or comparable
RAM	≥ 4 GB
File storage	min. 20 GB free SSD storage space
Network connection	Required for client/server operation
Interfaces	1x USB for test device 1x audio input / USB for Labtec PRO microphone 1x USB each for accessories
